

Table of contents

Introduction	1
<i>François Pellegrino, Egidio Marsico, Ioana Chitoran and Christophe Coupé</i>	
Part 1: Complexity and phonological primitives	
Complexity in phonetics and phonology: gradience, categoriality, and naturalness	21
<i>Ioana Chitoran and Abigail C. Cohn</i>	
Languages' sound inventories: the devil in the details	47
<i>John J. Ohala</i>	
Signal dynamics in the production and perception of vowels	59
<i>René Carré</i>	
Part 2: Typological approaches to measuring complexity	
Calculating phonological complexity	85
<i>Ian Maddieson</i>	
Favoured syllabic patterns in the world's languages and sensorimotor constraints	111
<i>Nathalie Vallée, Solange Rossato and Isabelle Rousset</i>	
Structural complexity of phonological systems	141
<i>Christophe Coupé, Egidio Marsico and François Pellegrino</i>	
Scale-free networks in phonological and orthographic wordform lexicons	171
<i>Christopher T. Kello and Brandon C. Beltz</i>	

Part 3: Phonological representations in the light of complex adaptive systems

The dynamical approach to speech perception: From fine phonetic detail to abstract phonological categories 193
Noël Nguyen, Sophie Wauquier and Betty Tuller

A dynamical model of change in phonological representations: The case of lenition 219
Adamantios Gafos and Christo Kirov

Cross-linguistic trends in the perception of place of articulation in stop consonants: A comparison between Hungarian and French 241
Willy Serniclaes and Christian Geng

The complexity of phonetic features' organisation in reading 267
Nathalie Bedoin and Sonia Krifi

Part 4: Complexity in the course of language acquisition

Self-organization of syllable structure: a coupled oscillator model 299
Hosung Nam, Louis Goldstein and Elliot Saltzman

Internal and external influences on child language productions 329
Yvan Rose

Emergent complexity in early vocal acquisition: Cross linguistic comparisons of canonical babbling 353
Sophie Kern and Barbara L. Davis
